DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 5,220,443 to Noguchi. Noguchi teaches a matrix wiring substrate used as for example a drive electrode assembly of an active matrix liquid crystal display, and more specifically to a matrix wiring substrate having a common electrode for preventing an electrostatic breakdown or destruction in a manufacturing process. As illustrated by circuit diagrams, a plurality of first level wirings (gate bus lines 3) are provided on an insulating substrate; a plurality of second level wirings (drain bus lines 4) are provided on the insulating substrate to intersect the first level wirings at a intersection P, and an insulating layer are provided at the intersection P so as to electrically separate the first and second level wirings from each other. The wiring substrate further comprises: a number of pixel electrodes 1 corresponding to pixels of the liquid crystal display and each associated with one TFT 2 for individually driving the corresponding pixel electrode 1; a gate (start) terminal 5 and a drain (end or ground) terminal arranged on a same side of the substrate via the intersection P, and non-linear resistor elements 21, 22, 31, 32, wherein since the non-linear elements 31 and 32 are connected between the checking pad 6 and the common electrode 9 and between the checking pad 8 and the

common electrode 10, respectively, a current can be discharged from opposite ends of each bus line 3 or 4 to corresponding common electrode 9 or 10 without giving any adverse effect to the wiring checking.
